

WARNING

Make sure you are installing the right repair kit intended for the liquid being transferred through the swivel

If the incorrect repair kit is used, leakage will occur that may cause serious injury and/or property damage

For SMAC-series swivels:

If your seal kit part number contains the letters LN in the model number, the seal kit can be used for LP-GAS or Natural Gas only

If your seal kit part number contains the letter N only in the suffix of the model number, the seal kit can be used for Anhydrous Ammonia only. LN type swivels are not compatible with Anhydrous Ammonia.

If your seal kit part number contains the letters FC in the model number, the seal kit can be used for Refined Fuels only.

If your seal kit part number contains the letters CR or SS in the model number, the seal kit can be used for LP-GAS only.

If your seal kit does not contain the letters LN, N, FC, CR, or SS in the model number, the seal kit can be used for LP-GAS only. Such is the case for the seal kit used for the JO-1 hose-end swivel.

For JO-series swivels:

If your seal kit part number contains the letters LN in the model number, the seal kit can be used for Anhydrous Ammonia.

If your seal kit part number only contains the letters SK in the model number, the seal kit can be used for LP-GAS or Natural Gas only.

It is important that you check the part number of your seal kit. This can be found on the picking slip that accompanied the seal kit shipment. The seal kit part number can also be found on the carton that contains the seal kit. If you are not able to locate the seal kit part number, do not use the seal kit. Call Full-Circle at 805-498-2589 and we will help to determine what seal kit you have.
